TRIAL EXHIBIT 1

CASE NO. 10-03561 WHA

DATE ENTERED _____

BY _____ DEPUTY CLERK

HIGHLY CONFIDENTIAL -
ATTORNEYS' EYES ONLY

Oracle America, Inc. v. Google Inc.
3:10-cv-03561-WHA

GOOGLE-00-00001773

Agenda

- Status Update
- What is Android?
- Near-term strategic decisions
 - Which type of Open Source are we?
 - How do we interact with OSS community?
 - How do we Open Source our JVM?

What is Android?

Project Android is building the world's first
Open Source handset solution with built-in
Google applications

Google[™]

The Model

Google works closely with Carriers and OEMs to help incorporate its Open Source OS into handset designs.

- The Carriers benefit from the ability to quickly deploy differentiating features and applications.
- The OEMs benefit from the above, and a dramatic reduction in BOM costs by utilizing a robust, free consumer OS platform.
- Google benefits by having more control of the user experience and built-in Google apps.

Google[®]

Why Open Source*

To disrupt the closed and proprietary nature of the two dominant industry players: MSFT and Symbian

To provide Carriers and OEMs a non-threatening solution for cross-vendor compatibility

To eventually build a community force around Google handset APIs and applications

* Our OSS license is a rider on a mainstream license such as Mozilla that requires licensee to maintain compatibility with Google APIs

Google[®]

Which OSS Model?

- Build product

A strategy where development happens internally, and once product has reached a certain level of stability it is released as open source.

- Community effort

A strategy where development is a collaborative effort between internal Google resources and a larger more diverse community of external Open Source developers. Typically there is a publicly accessible source code repository with a informal check-in procedure.

Google[™]

JAVA

- Why Java?
 - Carriers require it
 - MSFT will never do it
 - Elegant tools story
 - Safe sandbox for 3rd party developers
 - Existing pool of developers and applications
 - Who pays? OEM pays sun a license, typically < .30 in volume

July 26, 2005

Google™

JAVA

- Java + Javascript/XML = Key differentiator

Current scenario:

- Developing a clean-room implementation of a JVM
- Need coffee-cup logo for carrier certifications
- Must take license from Sun
- Cost isn't the issue, open source JVM is the issue

Proposal:

- Google/Android, with support from Tim Lindholm, negotiates the first OSS J2ME JVM license with Sun
- Outcome could reinforce our JVM development, or perhaps result in us convincing Sun to Open Source their JVM implementation.
